

TECHNOLOGIES

HORIZONTAL CENTRIFUGE

Through a simple blood sample from the patient, we are able to extract its growth factors and stem cells to be applied in the area where rejuvenation therapy will be performed.

OZONE THERAPY

Used to obtain a better disinfection of the areas to be treated, shorten recovery times of the targeted areas and promote better long-term results. In just a few minutes it is possible to virtually eliminate all bacteria, viruses and fungi present in the treated area.

INJECTIONS & MICRONEEDLING

Digital electric microneedling (painless) uses special microneedles for infusing natural collagen into the skin. The combination with PRF is ideal for optimal results.

ATP38 - PHOTOBIMODULATION

This state-of-the-art Swiss technology uses low intensity light therapy, with a wide range of frequencies, enhancing the energetic activation of cells, therefore increasing the body's own regenerative potential.

The Paz Protocol combines all these technologies in one consultation.

PAZ PROTOCOL

SO MUCH MORE THAN AN AESTHETICS PROCEDURE, A COMPLETE REGENERATING TREATMENT

Developed at White Clinic, this exclusive protocol is a facial rejuvenation treatment that combines advanced technologies and techniques, and is 100% natural, given that it uses the patient's own cells to rejuvenate skin. And without any type of adverse reaction. The **Paz Protocol** is comprised of a range of treatments with proven results when it comes to facial skin rejuvenation.

PRF (PLATELET RICH FIBRIN)

AN ALLY IN COMBATING SKIN AGING

How it works

As we age, so does our skin, which becomes looser and less elastic. The main reason for this is a reduction in collagen, which begins around age 25. The application of PRF as a facial filler, which is more advanced than PRP (known as plasma) and contains stem cells, helps increase the volume of the face structure that has suffered signs of aging, by filling in the furrows of the deepest wrinkles and restoring lost collagen, the main responsible for the appearance of wrinkles on our skin. It can also be considered a preventive treatment.

THIS TREATMENT IS INDICATED FOR:

Wrinkles	Loose skin
Scars	Large pores
Acne scars	Pigmentation, spots,
Stretch marks	melasma
Fine lines	Hair regeneration

This treatment is recommended before and after hair transplants.

PRF AND MICRONEEDLING

POWERFUL COMBINATION FOR FACIAL REJUVENATION

How it works

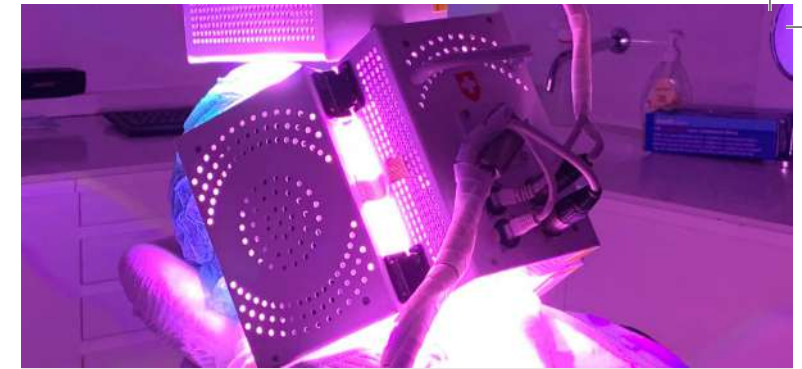

The restoration of collagen in areas of the face with PRF, in combination with Microneedling, is one of the most innovative techniques in aesthetic medicine. PRF is the only biostimulator capable of increasing the vascularization of the skin, something that we lose as we age. Together they fill in the skin's fine lines and promote its rejuvenation. The procedure uses small needles on the outer and deep layer of the skin to stimulate your body to produce new collagen and elastin.

FIRM AND RADIANT SKIN

- Accelerates and increases cell regeneration
- 100% natural and autogenous
- No adverse effects
- Painless
- Stronger, more united cells
- Recommended for all skin types

Proven results at Goethe University Frankfurt, Germany.

PHOTOBIMODULATION

The **Paz Protocol** combines the PRF Facial technique with photobiomodulation therapy, which uses ATP38 technology (Switzerland). This 100% biological therapy uses the energy of light to stimulate cell regeneration, which means faster and more efficient results.

OZONE THERAPY

YOUNGER AND HEALTHIER

Enhance the results of the rejuvenating treatment with PRF in combination with Ozone Therapy. Benefit from the properties of ozone:

- Analgesic
- Anti-inflammatory
- Revitalizing and regenerating oxidizer
- Anti-oxidant and anti-free radicals
- Germicide
- Immuno-modeler

VITAMIN TESTS AND TREATMENTS

TOP LEVEL HEALTH

IV Infusions and Endolaser

Strengthen your immune system and rejuvenate with our exclusive intravenous anti-aging vitamin protocol and photobiomodulation technology (Endolaser).
